```
a) captains = {dict}b) type(captains)
```

c) captains.dict()
d) captains = {}

Ans- d) captains = {}

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains {"Enterprise" = "Picard"} captains {"Voyager" = "Janeway"}captains {"Defiant" = "Sisko"}
```

```
b) captains["Enterprise"] = "Picard" captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
```

```
c) captains = {
  "Enterprise": "Picard",
  "Voyager": "Janeway",

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
    print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")

```

Ans- b) for ship, captain in captains.items(): print(f"The {ship} is captained by {captain}.")

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captains
- b) captains.remove()
- c) del captains["Discovery"]
